

Letter of Recommendation

Department of Architecture, Pusan National University
2 Busandaehak-ro, 63beon-gil, Geumjeong-gu, Busan, Republic of Korea, 46241

August 23rd, 2026

To Whom it May Concern,

I am Professor Seonghwan Yoon of the Building Environment Science and Technology Laboratory, Department of Architecture, Pusan National University. I have supervised **Mr. Dimas Maulana Fasya's** Master's research from September 2024 to August 2026, and I recommend him for your doctoral program.

Mr. Fasya's thesis examined how an integrated passive envelope of double-skin façade, thermal stack tower, and external louvers performs in hot-humid tropical climates. He found that the heated façade cavity dominates the building's airflow and starves the occupied zone of fresh air, and he built a diagnostic metric to measure it. He reached this on his own, using a coupled EnergyPlus and Airflow Network model that he built, validated, and analyzed in Python.

What I value is how he works. He checks his sources, questions his own assumptions, and revises carefully rather than settling for a first result. His work has been published in proceedings papers (IOP Conference Series: Earth and Environmental Science) and presented at the 2025 International Conference on Green Technology in Malang, Indonesia. He is currently responsible for the authorship of two papers in Q1, which still undergoing the peer-review process. Prior to his graduate studies, he pursued a career in architecture, which has enabled him to apply a pragmatic approach to his research, grounded in the design and construction of real buildings.

He is diligent, works well alone and in a team, and explains his ideas clearly in English. I am confident he is ready for doctoral study and will contribute real research. I recommend him without reservation, and I am glad to answer any questions.

Sincerely,

Seonghwan Yoon, Ph.D
Professor of Department of Architecture
Pusan National University
